Support for Windows 8.1 has been withdrawn.

This means that there is no technical support for TachoScan Control faults caused by the Windows 8.1 operating system.

### Support for second generation of the second version (G2V2) smart tachographs

- Support for Smart Tachographs of the second generation of the second version (G2V2) was added.

### Transferring of the TachoScan Control program to MS SQL

- The existing TachoScan Control database system was changed to Microsoft SQL Server. This change applies to all types of TachoScan Control licenses.

### License transfer

- The way of license transfer has been changed. It is not possible to transfer a license during an upgrade from Access (6.6.9 and lower) to MS SQL (7.0.0 and above). In such a situation, you must first update the program to the MS SQL version (7.0.0), and then transfer the license.

### New language version of the program

- Spanish language version of the program in BETA version was added.  
(*menu: Settings -> Program settings*)
- The option to choose the Spanish language was added (**Select program language and tariff**).

### Separation of functions from languages

- Functions were separated from languages, allowing a given inspection to work in more than one language within one organization and with different default settings.
- The option of language selection and inspection has been added during the installation and updating of the TachoScan Control. program.  
(*menu: Settings -> Program settings*)
- In the main settings window, the ability to change the program and inspection language has been added. Changing the inspection results in changing the tariff and functionality.

### DSRC

- New pre-selections for smart tachographs of the second generation of the second version (G2V2) have been added to the main window.
